-----Instruction-----

1. There are two files here, one is conf and other is shell
2. Put all shell files into tweetgetter file
3. Use below command to run the supervisor:
 - `cd /etc/supervisor/conf.d`
 - put the conf files in above directory
 - `sudo supervisorctl reread`
 - `sudo supervisorctl update`
4. you can use “`sudo supervisorctl`” to check the current running shell

More info can access:
